

Atelier 2 - Django

**Intégration d'un Template dans une
application Django**

I. Introduction

On se propose de mettre en place une application web de gestion de commandes pour un restaurant.

Nous allons voir comment créer un système de commande de restaurant qui permettra d'accepter les commandes en ligne, de traiter les paiements en ligne et de gérer l'exécution des commandes.

Le secteur de la restauration est en pleine transformation : l'explosion des nouvelles technologies et les changements d'habitudes des consommateurs ont rebattu les cartes pour les professionnels de la restauration rapide. En effet, les restaurants rapides répondent à un grand nombre de commandes quotidiennes. La rentabilité est atteinte par les volumes, c'est pourquoi il est indispensable de savoir recevoir et traiter toutes les commandes dans les meilleures conditions.

Une application de gestion de commande permet, pour un restaurant rapide, de centraliser plus facilement l'ensemble des ordres reçus de ses clients. L'idéal est de posséder une gestion tout-en-un, afin de recevoir en ligne les commandes passées.

Naturellement, il est possible d'inclure également les commandes prises sur place. Ainsi, vous n'aurez plus à entrer manuellement vos commandes et toute votre administration est centralisée dans la même solution.

II. Installation Django

1. Virtualenv

Création

Créer un dossier, puis y exécuter la commande :

```
python -m venv myenv
```

Puis l'activer

```
myenv\Scripts\activate
```

requirements

```
pip freeze > requirements.txt
```

2. Installation de Django

On installe Django avec pip :

```
pip install django
```

III. Création du projet de base

1. La commande django-admin

Permet de créer un projet, une application ou d'inspecter un projet existant (base de données, etc)

```
django-admin startproject Restaurant
```

```
cd Restaurant
```

2. Lancement du serveur

```
python manage.py runserver
```

IV. Création d'une application dans le projet

```
django-admin startapp home
```

V. Configuration

Editez le fichier *settings.py* pour y configurer

Restaurant >  settings.py

A la place de

```
LANGUAGE_CODE = 'en-us'
```

```
TIME_ZONE = 'UTC'
```

```
USE_I18N = True
```

```
USE_TZ = True
```

Mettre

```
LANGUAGE_CODE = 'fr-fr'
```

```
TIME_ZONE = 'Europe/Paris'
```

```
USE_I18N = True
```

```
USE_L10N = True
```

```
USE_TZ = True
```

```
DATE_INPUT_FORMATS = ( '%d/%m/%Y', '%Y-%m-%d' )
```

Puis ajouter notre nouvelle app aux applications chargées par défaut :

```
# Application definition

INSTALLED_APPS = [
    'django.contrib.admin',
    'django.contrib.auth',
    'django.contrib.contenttypes',
    'django.contrib.sessions',
    'django.contrib.messages',
    'django.contrib.staticfiles',
    'home',
]
```

VI. Les URLs et les Vues

Pour faire fonctionner notre application, nous avons besoin de configurer au moins une *route* (URL) qui va déclencher un comportement. Les routes se configurent dans les fichiers *urls.py*, tout d'abord celui de l'app principale, puis dans les fichiers *urls.py* des autres apps.

1. Le fichier *urls.py*

Editons tout d'abord le fichier principal *Restaurant/urls.py*

Restaurant >  *urls.py*

Puis ajoutons la ligne suivante dans *urlpatterns*. Vous aurez un petit *import* à ajouter (include)

```
from django.contrib import admin
from django.urls import path, include

urlpatterns = [
    path('admin/', admin.site.urls),
    path('', include('home.urls'))
]
```

2. Fichier *urls.py* dans l'App *home*

Créons ensuite dans le répertoire fichier *urls.py* de notre application :

home >  *urls.py*

```
from django.urls import path
from . import views

urlpatterns = [
    path('', views.index, name='index'),
]
```

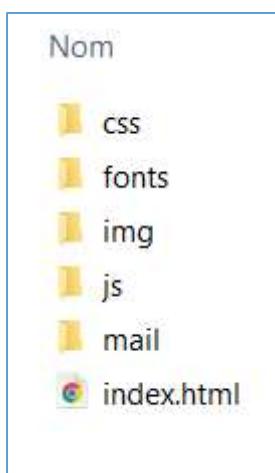

3. Télécharger un template

On va télécharger un template HTML à partir de l'adresse

<https://www.free-css.com/free-css-templates/page231/touche>

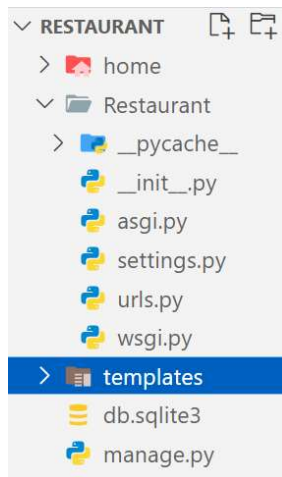

4. Extraire le template téléchargé

Après avoir téléchargé le template, il faut l'extraire. Vous obtiendrez un dossier contenant des fichiers HTML, CSS, JavaScript, et éventuellement des images.

5. Organiser les fichiers du template

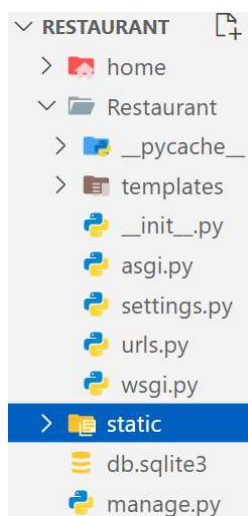

Placez les fichiers du template dans les dossiers appropriés de votre projet Django : Créer un dossier templates à la racine du projet.

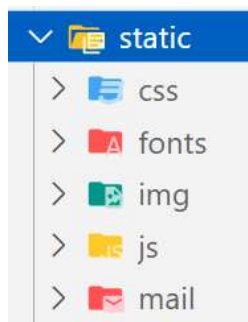

Puis y déplacer fichier index.html du template téléchargé

Créer un dossier static

Déplacez les fichiers statiques (le reste des dossiers du template téléchargé) dans my_app/static/.

6. Configurer les fichiers statiques dans Django

Assurez-vous que Django est configuré pour servir les fichiers statiques :

Dans `settings.py`, configurez le dossier statique :

Restaurant >  settings.py

```
import os
```

...

```
# Static files (CSS, JavaScript, Images)
# https://docs.djangoproject.com/en/5.1/howto/static-files/

STATIC_URL = '/static/'
# Emplacement des fichiers statiques
STATICFILES_DIRS = [
    os.path.join(BASE_DIR, 'static'), # Répertoire global
]
```

....

```
TEMPLATES = [
    {
        'BACKEND': 'django.template.backends.django.DjangoTemplates',
        'DIRS': [os.path.join(BASE_DIR, 'templates')],
        'APP_DIRS': True,
        'OPTIONS': {
            'context_processors': [
                'django.template.context_processors.debug',
                'django.template.context_processors.request',
                'django.contrib.auth.context_processors.auth',
                'django.contrib.messages.context_processors.messages',
            ],
        },
    ],
]
```

7. Adapter les chemins des fichiers statiques dans les templates

Les chemins d'accès aux fichiers CSS, JS, et images dans les fichiers HTML doivent être modifiés pour utiliser le système de gestion statique de Django.

Exemple de modification dans `index.html` :

Original :

```
<link rel="stylesheet" href="assets/css/style.css">
<script src="assets/js/script.js"></script>

```

Modifié pour Django :

```
{% load static %}
<link rel="stylesheet" href="{% static 'css/style.css' %}">
<script src="{% static 'js/script.js' %}"></script>

```

- {% load static %} : Charge le tag static de Django.
- {% static 'path/to/file' %} : Génère le chemin correct pour les fichiers statiques.

Le fichier index.html après adaptation est devenu :

templates >  index.html

```
{% load static %}
<!DOCTYPE html>
<html lang="en">
<head>
<meta charset="utf-8">
<meta name="viewport" content="width=device-width, initial-scale=1">
<title>Touché</title>
<meta name="description" content="">
<meta name="author" content="">

<!-- Bootstrap -->
<link rel="stylesheet" type="text/css" href="{% static 'css/bootstrap.css' %}">
<link rel="stylesheet" type="text/css" href="{% static 'fonts/font-awesome/css/font-awesome.css' %}">

<!-- Stylesheet

8. Créer la vue Django pour la page

Créez une vue dans `views.py` pour afficher la page :

home >  views.py

```
from django.shortcuts import render

def index(request):
    return render(request, 'index.html')
```

9. Tester l'intégration

Démarrez le serveur de développement et testez dans le navigateur :

```
python manage.py runserver
```

Accédez à :

<http://127.0.0.1:8000/>
